What is a true learning organization, and how can your school become one? To excel, schools must embrace continuous school improvement and evaluation, as well as systems thinking. In Measuring What We Do in Schools, author Victoria L. Bernhardt details the critical role program evaluation serves in school success and how to implement meaningful evaluations that make a difference. She provides a roadmap of how to conduct comprehensive, systemwide evaluations of programs and processes; the tools needed to obtain usable, pertinent information; and how to use these data to expand teachers' and administrators' data-informed decision-making focus. Educators will learn how to * Assess what is working and not working for students * Determine which processes need to change * Use data to improve practices on an ongoing basis Although challenging for many schools, program evaluation and data analysis can begin with a single program or process, over time building on the expanded knowledge of the school's processes and the results they produce. An effective tool—The Program Evaluation Tool—enables schools to easily identify the purpose and intended outcomes of any school program, along with whom it serves, and how it should be implemented, monitored, and evaluated. These data can then be used to improve every aspect of a school's programs and processes and the outcomes achieved. Filled with practical strategies and featuring an in-depth case study, this book is designed to help educators see that evaluation work is logical and easy to do. They'll gain the confidence to do this work on a regular basis—working together to become a true learning organization. Organized for easy reference and crucial practice, coverage of all the essential topics presented as 500 AP-style questions with detailed answer explanations 5 Steps to a 5: 500 AP English Literature Questions to Know by Test Day is tailored to meet your study needs—whether you've left it to the last minute to prepare or you have been studying for months. Teaching in the Fast Lane offers teachers a way to increase student engagement: an active classroom. The active classroom is about creating learning experiences differently, so that students engage in exploration of the content and take on a good share of the responsibility for their own learning. It's about students reaching explicit targets in different ways, which can result in increased student effort and a higher quality of work. Author Suzy Pepper Rollins details how to design, manage, and maintain an active classroom that balances autonomy and structure. She offers student-centered, practical strategies on sorting, station teaching, and cooperative learning that will help teachers build on students' intellectual curiosity, self-efficacy, and sense of purpose. Using the strategies in this book, teachers can strategically "let go" in ways that enable students to reach their learning targets, achieve more, be motivated to work, learn to collaborate, and experience a real sense of accomplishment.

If a picture is worth a thousand words, then it's a good bet that at least half of those words relate to the picture's copyright status. Art historians, artists, and anyone who wants to use the images of others will find themselves awash in byzantine legal terms, constantly evolving copyright law, varying interpretations by museums and estates, and despair over the complexity of the whole situation. Here, on a white—not a high—horse, Susan Bielstein offers her decades of experience as an editor working with illustrated books. In doing so, she unsnarls the threads of permissions that have ensnared scholars, critics, and artists for years. Organized as a series of "takes" that range from short sidebars to extended discussions, Permissions, A Survival Guide explores intellectual property law as it pertains to visual imagery. How can you determine whether an artwork is copyrighted? How do you procure a high-quality reproduction of an image? What does "fair use" really mean? Is it ever legitimate to use the work of an artist without permission? Bielstein discusses the many uncertainties that plague writers who work with images in this highly visual age, and she does so based on her years navigating precisely these issues. As an editor who has hired a photographer to shoot an incredibly obscure work in the Italian mountains (a plan that backfired hilariously), who has tried to reason with artists' estates in languages she doesn't speak, and who has spent her time in the archival trenches, she offers a snappy and humane guide to this difficult terrain. Filled with anecdotes, asides, and real courage, Permissions, A Survival Guide is a unique handbook that anyone working in the visual arts will find invaluable, if not indispensable.

Interactive Distributed Multimedia Systems (IDMS) and Protocols for Mul- media Systems (PROMS) have been two successful series of international events bringing together researchers, developers and practitioners from academia and industry in all areas of multimedia systems. These two workshops successfully merged in 2003 and now constitute the MIPS workshop. After the outstanding MIPS 2003 workshop, organized in Naples, Italy, by GiorgioVentreandRobertoCanonico,fromtheUniversityofNaplesFedericoII, MIPS2004movedtoGrenoble,France. Followingthegreattradition,MIPS2004 was intended to contribute to scienti?c, strategic and practical advances in the area of distributed multimedia applications, protocols and intelligent mana- ment tools, with emphasis on their provision over novel

network architectures. This is undoubtedly a rather broad area, which is con?rmed by the large range of topics that were addressed in the submitted (and accepted) papers. This year the Call for Papers attracted 74 submissions, essentially from - rope and Asia, plus a few contributions from North America, the Middle East, and Africa, for a total of 20 countries. We would like to express our warmest gratitude to all the authors, without whom organizing this event would have been impossible! Thanks to the outstanding work of the Program Committee and the ad- tional reviewers, 20 full-sized papers and 5 additional short papers were ?nally accepted, which was not an easy task. Like MIPS 2003, MIPS 2004 remained a highly selective event (33% acceptance ratio, including the short papers) which is the best warrant of a good program quality.

Grading is one of the most hotly debated topics in education, and grading practices themselves are largely based on tradition, instinct, or personal history or philosophy. But to be effective, grading policies and practices must be based on trustworthy research evidence. Enter this book: a review of 100-plus years of grading research that presents the broadest and most comprehensive summary of research on grading and reporting available to date, with clear takeaways for learning and teaching. Edited by Thomas R. Guskey and Susan M. Brookhart, this indispensable guide features thoughtful, thorough dives into the research from a distinguished team of scholars, geared to a broad range of stakeholders, including teachers, school leaders, policymakers, and researchers. Each chapter addresses a different area of grading research and describes how the major findings in that area might be leveraged to improve grading policy and practice. Ultimately, Guskey and Brookhart identify four themes emerging from the research that can guide these efforts: - Start with clear learning goals, - Focus on the feedback function of grades, - Limit the number of grade categories, and - Provide multiple grades that reflect product, process, and progress criteria. By distilling the vast body of research evidence into meaningful, actionable findings and strategies, this book is the jump-start all stakeholders need to build a better understanding of what works—and where to go from here.
