*As the demand for English language education grows in Asia, there has been a parallel growth in the development and implementation of standardized tests at the local level. Offering much-needed context on locally produced tests in Asia, contributors examine emerging models for English language assessment and the impact these large-scale tests have on the teaching and learning of English. Chapters address the following well-*

The acclaim it received encouraged us to organise PERM 2 but choosing a relevant and topical programme was a clairvoyant challenge in its own right. Since PERM 1 we have seen a number of developments, in the UK and internationally, that have thrown the problems that society must face into sharp relief. Drawing on the expertise of contributors from science, many medical specialities, philosophy, theology and economics, we have sought to address the issues raised by these new developments, as well as a number of long-standing issues that*

This latest volume lists all the major research projects being undertaken in Britain during the latter months of 1992, the whole of 1993 and the early months of 1995. The purpose of the present text is to distil the experience a number of workers active in the field of biochemical education, so providing readable accounts which, it is hoped, will be of significant benefit to those who are new the teaching profession in addition to those who may be stimulated to experiment with alternative strategies in their own teaching situation. From the various

contributions considered in this book, each topic, in its widest sense, would warrant at least a volume on its own and indeed such texts are currently available. However, it was felt more appropriate to restrict the coverage to those aspects which are of particular use to the subject of biochemistry and, for which, work in this area has already achieved some measure of success. In effect what each of is doing is supplying findings from a body of knowledge collectively called educational technology. Without entering the debate on the semantics of what educational technology is or is not, it doesn't take long to realise that, like the vast majority of subject areas, it has its own unique terminologies and vocabulary. Whilst it is inevitable that

such terms will appear throughout the text, hopefully all will be explained on first use and so it is not envisaged that this will be too distracting to the reader.

This new volume in the Toolkit series is designed for clinicians and junior researchers who need to interpret the evidence for the effectiveness of the many diagnostic tests now available. Exceptionally user-friendly, this pocket-sized textbook realizes readers are not experts in diagnostic test interpretation. The authors cover a variety of issues, from how to design diagnostic test studies to understanding the results of diagnostic tests and interpreting the findings for clinical practice and health care policy.
