

## Fidic Users Guide A Practical Guide To The 1999 Red And Yellow Books Incorporating Changes And Additions To The 2005 Mdb Harmonised Edition By B W Totterdill 2006 01 01

*Addresses key topic within bridge engineering, from history and aesthetics to design, construction and maintenance issues. This book is suitable for practicing civil and structural engineers in consulting firms and government agencies, bridge contractors, research institutes, and universities and colleges.*

*This work provides a detailed hands-on guide to the drafting, negotiation and interpretation of natural gas and LNG sales and transportation contracts Explains the critical components of the agreements which set out the terms between buyers, sellers, transporters and shippers, leading to the sale and transportation of gas and LNG. Discusses the nature of gas and LNG (including shales and unconventional) and the contracting process Offers clause-by-clause commentary on the typical provisions within gas and LNG sales and transportation agreements Pinpoints the key issues and suggests solutions to problems that can arise identifies the legal and commercial issues involved at each stage, from quality specification and force majeure to liabilities, limitations and dispute resolution, and advises how they should be handled in the contract. Provides discussion on the commercialisation of natural gas in light of recent concerns about climate change, cleaner energy sources and the security of energy supplies Includes expertly drafted precedents, also on a CD-ROM for rapid drafting Written from the perspective of English law but in the light of international experience and practice*

*Provides a clear and comprehensive guide to the 2017 FIDIC contracts—written by a member of the FIDIC Updates Task Group FIDIC contracts are the most widely used engineering standard form contracts internationally but until 2017 the three main forms (the Red, Yellow and Silver Books) had not been amended or updated for nearly two decades, since the first editions were published in 1999. Written by a specialist lawyer who was member of the FIDIC Updates Task Group responsible for writing the new contracts, this book examines in detail the many substantial changes they have introduced. After providing an overview the contracts are examined clause by clause with the aim of showing how each compares and contrasts with the others and how the second editions compare and contrast with the first. The first chapter describes how the Red, Yellow and Silver Books evolved from earlier contract forms and the distinctive characteristics of each, before providing an overview of the updates, including new potential risks for both Employer and Contractor, and then examining, in the second chapter, key general provisions such as the new rules on notices and limitation of liability. Chapter 3 examines the enhanced role of the Engineer in the Red and Yellow Books/Employer’s Representative’s function in the Silver including the new procedure for determinations as well as the Employer’s obligations and contract administration. The Contractor’s obligations are considered in chapter 4 while chapter 5 examines his responsibility for design in the Yellow and Silver Books. Chapters 6 to 14 deal respectively with plant, materials and workmanship and staff and labour; time-related provisions in the three contracts including extensions of time, and the Employer’s right to suspend the works; testing on and after completion and the Employer’s taking over of the works; defects after taking over, acceptance of the works and unfulfilled obligations; measurement (in the Red Book), the Contract Price and payment; the new variations regime and adjustments to the Price; termination and suspension; care of the works and indemnities and Exceptional Events (previously, Force Majeure). An important feature of the new contracts is their increased emphasis on clarity in the claims process and on dispute avoidance. These topics are examined in the final two chapters, 15 and 16, which deal respectively with the new claims and dispute resolution provisions of the 2017 forms. FIDIC contracts are the most widely used standard forms of contract for international engineering and construction projects Provides a clear and comprehensive guide to the 2017 FIDIC Red, Yellow and Silver Books Written by a senior specialist lawyer and member of the FIDIC 2017 Updates Task Group responsible for writing the new contracts Accessible to those with little or no familiarity with FIDIC contracts The 2017 FIDIC Contracts is an important guide for anyone engaged in international projects, including employers, contractors, engineers, lawyers, suppliers and project financiers/sponsors.*

*A Clause by Clause Commentary*

*FIDIC - A Guide for Practitioners*

*An Employer’s and Engineer’s Guide to the FIDIC Conditions of Contract*

*A Companion to the 2017 Plant and Design-Build Contract*

*A Practical Guide to the Red, Yellow, Mdb Harmonised and Subcontract Books*

*Understanding the FIDIC Red Book*

*This guide will help the contractor’s staff overcome some of the difficulties encountered on a typical international contract using FIDIC forms. The majority of FIDIC-based contracts use the Red Book (Conditions of Contract for Construction), so this book concentrates on the use of those particular forms. Supplementary comments are included in Appendix C for the Yellow Book (Plant & Design-Build) recommended for use where the contractor has a design responsibility. The Contractor is represented on site by the Contractor’s Representative who carries the overall responsibility for all the Contractor’s on-site activities. In order to provide guidance to the Contractor’s Representative and his staff, this book is divided into five sections: A summarized general review of the Red Book from the Contractor’s perspective. A review of the activities and duties of the Contractor’s Representative in the same clause sequencing as they appear in the Red Book. A summary of these activities and duties but arranged in order of their likely time sequence on site. This has the added intention of providing the Contractor’s Representative with a means of ensuring that documents are not only properly provided to the Employer and Engineer, but most importantly that they are provided within the time limits specified in the contract. A selection of model letters is provided which make reference to the various clauses of the contract requiring the Contractor to make submissions to the Employer or Engineer. Various appendices. The guide is not intended to be a review of the legal aspects of FIDIC-based contracts; legal advice should be obtained as and when necessary, particularly if the Contractor has little or no knowledge of the local law. Armed on site with a copy of The Contractor and the FIDIC Contract, the Contractor’s Representative will be more able to avoid contractual problems rather than spend considerable time and energy resolving those problems once they have arisen.*

*Delays in construction projects are frequently expensive, since there is usually a construction loan involved which charges interest, management staff dedicated to the project whose costs are time dependent, and ongoing inflation in wage and material prices. Many techniques are used to analyze delays. Some of these methods have inherent weaknesses and should be avoided. This book points out the shortcomings of these faulty methods and explains how a delay analysis should be performed. It then describes specifically how the analysis is done with CPM schedules. A explanation of delays and delay damages, presented in a straightforward, accessible manner, should be useful to public and private owners, construction managers, general contractors, subcontractors, designers, suppliers, and attorneys whose work involves them in the construction industry. The discussion will include subtleties of the process, such as shifts in the critical path, and non-critical delays. The subject of damages is covered in detail, including the major categories of extended field overhead and unabsorbed home office overhead. Likewise, the damages suffered by the owner, either actual or liquidated, are also explained. Finally, a chapter is devoted to managing the risk of delays and time extensions from the viewpoints of the various parties to a construction project. A discussion of early completion schedules and constructive acceleration is also included. In this new edition, all chapters are updated to reflect the changes in the construction field since the first edition published over 16 years ago. The Second Edition includes over 40% more information such as new methods for analyzing delays with examples of the proper approach. The author also includes a new chapter on risk management which focuses on the delay-related risks of the various parties in a construction project. Explains the different categories of delays Addresses the concept of concurrency and also non-critical delays Discusses the more common approaches used for measuring and analyzing delays and the strengths and weaknesses associated with them Prevention of Time-Related Delay Problems*

*The terms of the Conditions of Contract for Design - Build and Turnkey have been prepared by the Federation Internationale des Ingenieurs Conseils (FIDIC) and are recommended for general use for the purpose of the design and construction of works where tenders are invited on an international basis; with minor modifications, the Conditions are also suitable for use on domestic contracts.*

*RICS Guidance Note*

*FIDIC Contracts: Law and Practice*

*FIDIC Users’ GuideA*

*A Practical Guide*

*FIDIC Red Book*

*International Construction Contract Law*

*“The book is an authoritative guide to construction law in the United Arab Emirates and the Gulf”—*

*FIDIC Contracts: Law and Practice is sure to become the leading industry standard guide to using the FIDIC forms, and is the only book to date which deals with the whole suites of contracts, including the new gold book for Design, Build and Operate projects. The White & Case work is outstanding in its detailed consideration and treatment of the legal aspects of the interpretation and application of the Conditions, touching on many points that most people would not have encountered. Humphrey Lloyd, International Construction Law Review (2010) ICLR 386*

*The Conditions of FIDIC’s book, the Conditions of Contract for Works of Civil Engineering Construction, was published in 1987 yet it has taken time for users to gain experience of the form in practice. This volume has been designed as an aid to anyone having to deal with FIDIC’s conditions, featuring: the full text of Parts I and II, plain English explanation of each clause, a clause-by-clause commentary, over 90 suggested forms for use with the conditions and a comparison of the 3rd and 4th editions. This guide aims to provide assistance in drafting civil engineering contracts, considering tender documentation, drafting and considering amendments to the conditions, advising on contracts, dealing with the conditions on site, administering civil engineering contracts and resolving claims and disputes.*

*Construction Law in the United Arab Emirates and the Gulf*

*The Guide to Construction Arbitration*

*Understanding FIDIC*

*NEC3*

*Manual of Construction Agreements*

*FIDIC Conditions of Contract for Design, Build and Operate Projects*

*This work examines the International Federation of Consulting Engineers’ contracts and breaks them down, making them both easier to understand and to refer to.*

*The ICE Conditions continues to be the dominant form of contract for civil engineering, despite the growing importance of the New Engineering Contract. The Seventh Edition of the ICE Conditions, published in 1999, introduced a number of changes, including: incorporating some of the concepts of the Latham Report amending certain provisions of the Sixth Edition which had attracted criticism rectifying conspicuous omissions from the text of earlier editions of the contract correcting small errors and faults from the previous edition modernising certain provisions and terms Brian Eggleston, whose previous book on the ICE Conditions was described as ‘likely to become the authoritative reference source for the Sixth Edition’, examines the contract clause by clause from a practical and legal viewpoint. There is extensive coverage of case law. Written by an experienced civil engineer and recognized authority on construction contracts, this book is an essential guide.*

*Understanding FIDIC explains in simple and practical terms what is often seen as a very complex range of international engineering and construction contracts. Covering the FIDIC 2017 Red, Yellow and Silver Books (referred to as ‘The Rainbow Suite’), the book gives an overview of all three contracts, including coverage of changes between the 1999 contracts and the present 2017 suite. FIDIC contracts are widely used as far afield as Europe, the Middle East, Asia and Australia, and this book provides a practical yet thorough guide to the key elements that practitioners preparing and administering these contracts would need to be aware of. In his approachable and readable style, Kelvin Hughes covers: The obligations and responsibilities of the Employer, the Employer’s Representative, the Engineer and the Contractor Quality and Defects Liability Design Responsibility and Liability Variations, Measurement and Payment Procedures Progress, Delays, Extensions of Time and Completion Suspension and Termination Insurances Employer’s and Contractor’s Claims The Dispute Avoidance/Adjudication Board and the Resolution of Disputes Tendering Anyone working with FIDIC contracts whether as the Employer, Employer’s Representative, Engineer or Contractor will benefit greatly from this easy-to-read guide to the Rainbow Suite. Students on professional courses or researching the contracts for project work will also find this book extremely useful.*

*FIDIC Users’ GuideA Practical Guide to the 1999 Red and Yellow BooksThomas Telford*

The procurement stage of the building process is critical to the success of any building project, and as such must be understood by everybody entering the industry. Introduction to Building Procurement is designed to familiarize the novice with the principles and methods of building procurement, starting at the most basic level. With chapter summaries and tutorial questions provided throughout the book, the reader

will get to grips with the following topics: the structure of the construction industry the nature of clients the historical development of building procurement methods the roles and responsibilities carried out in any project. Having developed the necessary background knowledge, the reader is then introduced to the more complex aspects of procurement in detail, such as: methods of paying contractors the main procurement routes in use standard forms of contract. The concluding chapter discusses emerging procurement trends, and speculates on future developments to bring the reader right up to speed with the modern industry. With its clear layout and highly accessible approach, Introduction to Building Procurement is the perfect introductory text for undergraduate students and professionals starting out on a career in quantity surveying, construction project management or construction commercial management.

In September 1999, FIDIC introduced its new Suite of Contracts,which included a ‘new’ Red, Yellow, Silver and Greenforms of contract. The ‘new’ Red Book was intended toreplace the 1992 fourth edition of the Red Book, with the ambitionthat its use would cease with time. This ambition has notmaterialised and is unlikely to do so in the future. Despite the importance of the 1999 Forms, there has been verylittle published on the new contracts adopted in them and how theyinteract with the previous forms. This important work considersthese aspects together with the many developments affecting thefourth edition of the Red Book that have taken place since 1997,when the second edition of this book was published, and relates them to key contracting issues. It is written by a charteredengineer, conciliator and international arbitrator with wideexperience in the use of the FIDIC forms and in the various disputesresolution mechanisms specified in them. Important features of this book include: · a detailed comparison of the wording of the1999 threemain forms, which although similar in nature: it neverthelesssignificantly differs in certain areas where the three formsdisagree due to their intended purpose · analysis of the rights and obligations of the partiesinvolved in the contract and the allocation of risksconcerned: · a range of ‘decision tree’ charts, analysingthe main features of the 1992 Red Book, including risks,indemnities and insurances, claims and counterclaims, variations,procedure for claims, programme and delay, suspension, payments andcertificates, dispute resolution mechanisms, and disputeboards: · a much enlarged discussion of the meaning of‘claim’ and ‘dispute’ and the types ofclaim with a discussion of the Notice provision in the 1999 formsof contract for the submittal of claims by a contractor and by anemployer: · the FIDIC scheme of indemnities and insurancerequirements: and the methods of dispute resolution provided by thevarious forms of contract: and · five new chapters in this third edition, the first fourchapters deal with each of the 1999 forms and the fifth chapter isconfined to the topic of Dispute Boards.

*FIDIC contracts are the most widely used contracts for international construction around the world and are used in many different jurisdictions, both common law and civil law. For any construction project, the General Conditions of Contract published by FIDIC need to be supplemented by Particular Conditions that specify the specific requirements of that project. The International Application of FIDIC Contracts: A Practical Guide provides readers with detailed guidance and resources for the preparation of the Particular Conditions that will comply with the requirements of the applicable laws that apply to the site where the work is carried out, and for the governing law of the contract, for a number of the jurisdictions in which FIDIC contracts are used. This book is essential reading for construction professionals, lawyers and students of construction law.*

*This book is a practical guide for anyone involved in preparing, administering or contributing to a NEC3 contract. It introduces the NEC3 family of contracts, how they fit together, and provides a better understanding of how to build up and assemble a contract and how to run a NEC3 Engineering and Construction Contract (ECC) for successful project outcomes.*

*Written by a member of the FIDIC President’s List of Adjudicators, this detailed and critical commentary on the FIDIC Red Book provides authoritative guidance and recommendations for best practice. Focusing on each Clause of the Condition of Contract, this book identifies pitfalls and logistics issues associated with its enforcement and ancillary processes, to give readers an advantage when operating with the FIDIC Red Book. Intended to promote the best use and growth of FIDIC, this guide will be essential for all users of the FIDIC Red Book, be they contractors, lawyers, engineers, students training to join these industries or any professional involved in the resolution of disputes involving the FIDIC Red Book.*

*The International Application of FIDIC Contracts*

*FIDIC Yellow Book: A Commentary*

*FIDIC Silver Book*

*The book analyses every aspect of the ease or otherwise of implementing the FIDIC Yellow Book Conditions of Contract. On a clause-by-clause basis, it highlights important structural features and suggests alternative text to avoid problems with the contract. Written in a user-friendly manner by an expert user of the FIDIC Suite of Contracts, who is a Member of the FIDIC President’s List of Adjudicators, this book will be a vital reference point for contractors, lawyers, engineers, arbitrators and all others concerned with the FIDIC contracts.*

*In 1999, a suite of three new conditions of contract was published by FIDIC, following the basic structure and wording harmonised and updated around the previous FIDIC Design-Build and Turnkey Contract (the 1992 “Orange Book”). These conditions, known as the “FIDIC rainbow, were the Conditions of C- tract for: I Construction, the so-called Red Book, for works designed by the Employer I Plant and Design-Build, the so-called Yellow Book, for works designed by the Contractor I EPC/Turnkey Projects, the so-called Silver Book, for works designed by the Contractor The first is intended for construction works where the Employer is responsible for the design, as for per the previous so-called Red Book 4th Edition (1987), with an important role for the Engineer. The other two conditions of contract are intended for situations when the Contractor is responsible for the design. The Plant and Design-Build Contract has the traditional Engineer while the EPC/Turnkey Contract has a two-party arrangement, generally with an Employer’s Representative as one of the parties.*

*An authoritative explanation of the Dispute Board (DB) process and a reference guide for users of the process throughout the world. The guide addresses the fundamentals of successful DBs and their important role in both avoiding and resolving disputes among the contracting parties on large and complex projects.*

*A Practical Guide to Application*

FIDIC contracts are the most widely used contracts for international construction around the world and are used in many different jurisdictions, both common law and civil law. For any construction project, the General Conditions of Contract published by FIDIC need to be supplemented by Particular Conditions that specify the specific requirements of that project subject to the relevant laws. FIDIC Contracts in Asia Pacific provides readers with detailed guidance and resources for the preparation of the Particular Conditions that will comply with the requirements of the applicable laws for a number of the jurisdictions in which FIDIC contracts are used. The laws that apply to the governing law of the contract, construction works and dispute resolution in each jurisdiction are identified. This book offers chapters on the FIDIC Conditions of Contract for Underground Works, and the perspective of a bilateral aid agency on the use of FIDIC contracts. Each jurisdiction features an outline of its construction industry and information on the impact of Covid-19 on both the execution of construction projects and the operation of construction contracts. This book is essential reading for construction professionals, lawyers and students of construction law using FIDIC contracts.

This new edition builds on Brian Totterdill’s legacy and will ensure that all users are brought up-to-date with the most recent FIDIC developments and its expansion into a more international arena.

Construction drafting is a central part of commercial property transactions, raising complex issues of law, interpretation and procedure. The key to addressing these issues lies in having rapid access to draft forms of agreement and specialist expertise based on a sound understanding of industry practice, case-law and current legislation.Manual of Construction Agreements is a complete guide to all aspects of the relevant law and practice. Richard Cockram, one of the country’s leading construction lawyers, provides detailed and authoritative commentary and a review of all standard form agreements relevant to the UK construction market. In addition there is an exhaustive suite of over 100 expertly drafted forms and precedents, together with comprehensive annotations.It is regularly updated to cover relevant developments in construction law and practice, and is fully up-to-date with the recent amendments to the Housing Grants, Construction and Regeneration Act 1996, effected by the Local Democracy, Economic Development and Construction Act 2009.The CD-ROM contains fillable Word documents of forms and precedents for use in connection with building and civil engineering contracts, particularly in cases incorporating the JCT 2011 or ICE or NEC standard forms, and the related appointment of consultants and ancillary documentation.

*Construction Delays*

*Keating on Construction Contracts*

*A Guide to Best Practices and Procedures*

*Understanding Them Clearly, Analyzing Them Correctly*

*Defining Completion of Construction Works*

*A Commentary*

When all parties involved in the construction process fully understand their roles and are able to anticipate potential points of conflict, disputes and delays will be minimised. The Employer’s and Engineer’s Guide to the FIDIC Conditions of Contract sets out the essential administrative requirements of a FIDIC based contract by reference to the FIDIC 1999 Red Book. The obligations and duties of the Employer and the Engineer are identified and discussed. Potential pitfalls are highlighted and likely consequences pointed out. The importance of the Employer’s role in the preparation of tenders, which fully reflect his requirements and duties and obligations arising in the execution of the works, is emphasised. The key role of the Engineer in the effective administration of contracts after award is examined and commentary provided. Included in the guide are a number of appendices, including model letters which will be of value to less experienced staff (particularly those whose mother-tongue is not the English language). Engineers, quantity surveyors and project managers engaged in the contractual administration of international projects using FIDIC forms of contract will find the concise guidance in simple and jargon-free language provided here invaluable. This, together with the author’s earlier book, Contractor’s Guide to the FIDIC Conditions of Contract - which describes the duties, rights and responsibilities of the Contractor – represents the totality of supervision, design and execution of construction projects executed under the FIDIC Conditions of Contract. This book’s companion website offers invaluable resources to freely download, adapt and use: Model letters for use by the Employer Model letters for use by the Contractor Sample Interim Payment Certificate Model Form for Submissions to the Engineer Model Form of Engineer’s Order for Varied Works Model Form of Daywork/Daily Record Sheets

The FIDIC Conditions of Contract for Construction and the Conditions of Contract for Plant and Design-Build (known as the 1999 Red Book and the 1999 Yellow Book) were first published in 1999 and have been used for a large number of contracts around the world. During 2005, FIDIC and the multilateral development banks cooperated to publish the MDB Harmonised Conditions of Contract for Construction. This book is a revised and extended edition of the authors earlier guides.
