

Fidic White 4th Edition

In this unique guide to the suite of contracts published by FIDIC (The International Federation of Consulting Engineers) - the contract forms most widely used for international construction undertakings - twenty-two outstanding authorities in construction law from a wide variety of countries, describe relevant likely pitfalls (and special opportunities) for foreign lawyers in each of their jurisdictions. This very useful book will be extremely welcome to in-house counsel who must evaluate the legal disposition of a proposed or pending construction contract subject to the laws of a foreign jurisdiction. It will continue to be of service as long as the project proceeds and beyond, particularly for the optimal resolution of disputes.

Although the legal principles involved in construction contracts and their management and administration are an aspect of general contract law, the practical and commercial complexities of the construction industry have increasingly made this a specialist field. Recognizing this, Construction Contracts is a fully revised edition of the UK's leading textbook on the law governing this area. Brought up to date with recent cases and developments in the law as it stands at July 2000, this new edition: takes full account of the effects of the Housing Grants, Construction and Regeneration Act 1996, the Arbitration Act 1996, the Contracts (Rights of Third Parties) Act 1999 and the changes in the legal system brought about by the Woolf reforms includes extended coverage of financial protection, construction insurance and tendering controls, as well as the Construction (Design and Management) Regulations has been revised to take account of changes to the common standard-form contracts, particularly the New Engineering Contract and the GC/Works family of contracts. Retaining the same basic approach as its successful predecessors, this important text introduces the general principles that underlie contracts in construction, illustrating

them by reference to the most important standard forms currently in use.

When all parties involved in the construction process fully understand their roles and are able to anticipate potential points of conflict, disputes and delays will be minimised. The Employer's and Engineer's Guide to the FIDIC Conditions of Contract sets out the essential administrative requirements of a FIDIC based contract by reference to the FIDIC 1999 Red Book. The obligations and duties of the Employer and the Engineer are identified and discussed. Potential pitfalls are highlighted and likely consequences pointed out. The importance of the Employer's role in the preparation of tenders, which fully reflect his requirements and duties and obligations arising in the execution of the works, is emphasised. The key role of the Engineer in the effective administration of contracts after award is examined and commentary provided. Included in the guide are a number of appendices, including model letters which will be of value to less experienced staff (particularly those whose mother-tongue is not the English language). Engineers, quantity surveyors and project managers engaged in the contractual administration of international projects using FIDIC forms of contract will find the concise guidance in simple and jargon-free language provided here invaluable. This, together with the author's earlier book, Contractor's Guide to the FIDIC Conditions of Contract - which describes the duties, rights and responsibilities of the Contractor – represents the totality of supervision, design and execution of construction projects executed under the FIDIC Conditions of Contract. This book's companion website offers invaluable resources to freely download, adapt and use: Model letters for use by the Employer Model letters for use by the Contractor Sample Interim Payment Certificate Model Form for Submissions to the Engineer Model Form of Engineer's Order for Varied Works Model Form of Daywork/Daily Record Sheets

Multi-Party and Multi-Contract Arbitration in the Construction Industry provides the first detailed review

of multi-party arbitration in the international construction sector. Highly practical in approach, the detailed interpretation and assessment of the arbitration of multi-party disputes will facilitate understanding and decision making by arbitrators, clients and construction contractors.

A Practical Guide to the 1999 Red and Yellow Books

Multi-Party and Multi-Contract Arbitration in the Construction Industry

A Practical Guide

Now in its second edition, Construction Law is the standard work of reference for busy construction law practitioners, and it will support lawyers in their contentious and non-contentious practices worldwide. Published in three volumes, it is the most comprehensive text on this subject, and provides a unique and invaluable comparative, multi-jurisdictional approach. This book has been described by Lord Justice Jackson as a "tour de force", and by His Honour Humphrey LLOYD QC as "seminal" and "definitive". This new edition builds on that strong foundation and has been fully updated to include extensive references to very latest case law, as well as changes to statutes and regulations. The laws of Hong Kong and Singapore are also now covered in detail, in addition to those of England and Australia. Practitioners, as well as interested academics and post-graduate students, will all find this book to be an invaluable guide to the many facets of construction law.

FIDIC Contracts: Law and Practice is sure to become the leading industry standard

guide to using the FIDIC forms, and is the only book to date which deals with the whole suites of contracts, including the new gold book for Design, Build and Operate projects. The White & Case work is outstanding in its detailed consideration and treatment of the legal aspects of the interpretation and application of the Conditions, touching on many points that most people would not have encountered. Humphrey LLoyd, International Construction Law Review [2010] ICLR 386

Guides to the FIDIC contract traditionally have been geared towards highlighting the legal aspects of claims arising from the contract. This text focuses on the practical administration of the contract recognizing the growing tendency for projects to be administered by local employers, consultants and contractors, rather than by international organizations.

The forms of tender, agreement, conditions and bond published by the Institution of Civil Engineers have been designed to standardise the duties of contractors, employers and engineers and to distribute fairly the risks inherent in civil engineering. This classic guide to the contracts provides an authoritative reference, and also a rich and practical introduction to the principles of construction law.

FIDIC User's Guide

Civil Engineering Project Management, Fourth Edition

Which Contract?

Risk and Insurance in Construction

An Employer's and Engineer's Guide to the FIDIC Conditions of Contract

Construction Law

A practical guide to quantity surveying from a main contractor's perspective. It covers measurement methodology (including samples using NRM2 as a guide), highlights the complex aspects of a contractor's business, reviews the commercial and contractual management of a construction project, and provides detailed and practical information on running a project from commencement through to completion.

This new edition updates and revises the best practical guide for on-site engineers. Written from the point of view of the project engineer it details their responsibilities, powers, and duties. The book has been fully updated to reflect the latest changes to management practice and new forms of contract.

The ICE Conditions continues to be the dominant form of contract for civil engineering, despite the growing importance of the New Engineering Contract. The Seventh Edition of the ICE Conditions, published in 1999, introduced a number of changes, including: incorporating some of the concepts of the Latham Report amending certain provisions of the Sixth Edition which had attracted criticism rectifying conspicuous omissions from the text of earlier editions of the contract correcting small errors and faults from the previous edition modernising certain provisions and terms Brian Eggleston, whose previous book on the ICE Conditions was described as 'likely to become the authoritative reference source for the Sixth

Edition', examines the contract clause by clause from a practical and legal viewpoint. There is extensive coverage of case law. Written by an experienced civil engineer and recognized authority on construction contracts, this book is an essential guide.

In 1999, a suite of three new conditions of contract was published by FIDIC, following the basic structure and wording harmonised and updated around the previous FIDIC Design-Build and Turnkey Contract (the 1992 “Orange Book”). These conditions, known as the “FIDIC rainbow, were the Conditions of Contract for: 1 Construction, the so-called Red Book, for works designed by the Employer 1 Plant and Design-Build, the so-called Yellow Book, for works designed by the Contractor 1 EPC/Turnkey Projects, the so-called Silver Book, for works designed by the Contractor The first is intended for construction works where the Employer is responsible for the design, as for per the previous so-called Red Book 4th Edition (1987), with an important role for the Engineer. The other two conditions of contract are intended for situations when the Contractor is responsible for the design. The Plant and Design-Build Contract has the traditional Engineer while the EPC/Turnkey Contract has a two-party arrangement, generally with an Employer’s Representative as one of the parties.

FIDIC

A Clause by Clause Commentary
Building Contract Claims
Drafting International Contracts
Choosing The Appropriate Building Contract
An Analysis of Contract Clauses

In September 1999, FIDIC introduced its new Suite of Contracts, which included a “ new ” Red, Yellow, Silver and Green forms of contract. The “ new ” Red Book was intended to replace the 1992 fourth edition of the Red Book, with the ambition that its use would cease with time. This ambition has not materialised and is unlikely to do so in the future. Despite the importance of the 1999 Forms, there has been very little published on the new concepts adopted in them and how they interact with the previous forms. This important work considers these aspects together with the many developments affecting the fourth edition of the Red Book that have taken place since 1997, when the second edition of this book was published, and relates them to key contracting issues. It is written by a chartered engineer, conciliator and international arbitrator with wide experience in the use of the FIDIC Forms and in the various dispute resolution mechanisms specified in them. Important features of this book include: · background and concepts of the various forms of contract; · a detailed comparison of the wording of the 1999 three main forms, which although similar in nature; it nevertheless significantly differs in certain areas where the three

forms diverge due to their intended purpose; · analysis of the rights and obligations of the parties involved in the contract and the allocation of risks concerned; · a range of 'decision tree' charts, analysing the main features of the 1992 Red Book, including risks, indemnities and insurances, claims and counterclaims, variations, procedure for claims, programme and delay, suspension, payments and certificates, dispute resolution mechanisms, and dispute boards; · a much enlarged discussion of the meaning of "claim" and "dispute" and the types of claim with a discussion of the Notice provision in the 1999 forms of contract for the submittal of claims by a contractor and by an employer; · the FIDIC scheme of indemnities and insurance requirements; and the methods of dispute resolution provided by the various forms of contract; and · five new chapters in this third edition, the first four chapters deal with each of the 1999 forms and the fifth chapter is confined to the topic of Dispute Boards.

This latest edition of The Red Book has been the subject of a detailed review and takes into account users' experiences and the latest thinking in project execution in the process industries. Legislation - such as the Housing Grants, Construction and Regeneration Act 1996 and the Contracts (Rights of Third Parties) Act 1999 and the Courts' interpretation of the legislation is covered. The guidance section is separated into two parts with Section 1 providing specific guidance on completing the Contract Agreement and Section 2 discussing general issues to aid understanding, highlighting

areas where special conditions may need to be written for the user's requirements. Suitable for use in lump sum contracts in a wide range of industries, particularly those where a high technical input is required in the design and construction and where a proven system or service is required for the completed project.

Many building contract claims are ill-founded, often because the basic principles are misunderstood. This highly regarded book examines the legal basis of claims for additional payment, and what can and cannot be claimed under the main forms of contract. It includes chapters dealing with direct loss and expense, liquidated damages, extension of time, concurrency, acceleration, time at large, common law and contractual claims, global claims, heads of claim and their substantiation. The new fourth edition has been substantially restructured and updated. Nearly 100 additional cases have been added as well as four new contracts: the JCT Construction Management and Major Project contracts, the JCT Standard Form of Domestic Subcontract, and the Engineering and Construction Contract (the NEC Form). The book continues to use the JCT Standard Form (JCT 98) as the basis of the text, with important differences highlighted in the other forms. Seventeen forms are dealt with and they have all been updated since the last edition of this book. This new edition is essential reading for architects, contract administrators, project managers and quantity surveyors. It will also be invaluable to contractors, contract consultants and construction lawyers. David Chappell BA(Hons Arch), MA(Arch), MA(Law), PhD,

RIBA has 45 years' experience in the construction industry, having worked as an architect in public and private sectors, as contracts administrator for a building contractor, as a lecturer in construction law and contract procedures and for the last fifteen years as a construction contract consultant. He is currently the Director of David Chappell Consultancy Limited and frequently acts as an adjudicator. He is Senior Research Fellow and Professor in Architectural Practice and Management Research at the Queen's University, Belfast. He was appointed Visiting Professor in Practice Management and Law at the University of Central England in Birmingham from 1 March 2003. David Chappell is the author of many articles and books for the construction industry. He is one of the RIBA Specialist Advisors and lectures widely. Vincent Powell-Smith LLM, DLitt, FCI Arb was a practising arbitrator and formerly Professor of Law at the University of Malaya and the International Islamic University, Malaysia. He was author of many books on construction law. John Sims FRICS, FCI Arb, MAE, FRSA is a chartered quantity surveyor now practising as a consultant, arbitrator, adjudicator and mediator in construction disputes. He is author of a number of books on building contracts and arbitration. This book provides over 160 model letters, with commentary for use with all the main JCT 2005 building contracts. It concentrates on problems which can arise during a project, and draws on the author's extensive experience as a contracts consultant. It is a companion to the author's Standard Letters in Architectural Practice which covers more routine matters. The revised Fourth Edition takes account of: * the 2005 editions of the JCT Standard Building Contract, the Intermediate Building Contract and the Minor Works Building Contract, both with their contractor's design versions, ICD and MWD * the 2004 updates of the Standard Form of Agreement for the Appointment of an Architect * changes to case law since the last edition was published in 1996 It will be an invaluable guide for architects, building surveyors and project managers.

FIDIC - A Guide for Practitioners

Construction Quantity Surveying

Conditions of Contract for Design-build and Turnkey

Construction Contracts

The Red Book

Lump Sum Contracts

The terms of the Conditions of Contract for Design - Build and Turnkey have been prepared by the Federation Internationale des Ingenieurs Conseils (FIDIC) and are recommended for general use for the purpose of the design and construction of works where tenders are invited on an international basis; with minor modifications, the Conditions are also suitable for use on domestic contracts. The FIDIC Conditions of Contract for Construction and the Conditions of Contract for Plant and Design-Build (known as the 1999 Red Book and the 1999 Yellow Book) were first published in 1999 and have been used for a large number of contracts around the world. During 2005, FIDIC and the multilateral development banks cooperated to publish the MDB Harmonised Conditions of Contract for Construction. This book is a revised and extended edition of the authors earlier guides.

Changes to the work on construction projects are a common cause of dispute. Such variations lead to thousands of

claims in the UK every year and many more internationally. Liability for variations is not only relevant to claims for sums due for extra work but this is also an important underlying factor in many other construction disputes, such as delay, disruption, defects and project termination. This is the first book to deal exclusively with variations in construction contracts and provide the detailed and comprehensive coverage that it demands. Construction Contract Variations analyses the issues that arise in determining whether certain work is a variation, the contractor's obligation to undertake such work as well as its right to be paid. It deals with the employer's power to vary and the extent of its duties to approve changes. The book also analyses the role of the consultant in the process and the valuation of variations. It reviews these topics by reference to a range of construction contracts. This is an essential guide for practitioners and industry professionals who advise on these issues and have a role in managing, directing and compensating change. Participants in the

construction industry will find this book an invaluable guide, as will specialists and students of construction law, project management and quantity surveying.

Which Contract? is an invaluable desktop companion to be turned to at the start of every new project and is recommended to any professional whose clients expect him or her to know the contemporary procurement landscape inside out. Providing clear guidance on how to identify the most appropriate procurement strategy and contract for a given set of circumstances, it has been brought fully up to date to take account of the latest editions of all the recognised forms from JCT 2011 to FIDIC.

Understanding the FIDIC Red Book

The ICE Conditions of Contract

The FIDIC Forms of Contract

Construction Contract Variations

Conditions of subcontract for works of civil engineering
construction

This guide will help the contractor's staff overcome some of the difficulties encountered on a typical international contract using FIDIC forms. The majority of FIDIC-based contracts use the Red Book (Conditions of Contract for Construction), so this book concentrates on the use of those particular forms. Supplementary comments are included in Appendix C for the Yellow Book (Plant & Design-Build) recommended for use where the contractor has a design responsibility. The Contractor is represented on site by the Contractor's Representative who carries the overall responsibility for all the Contractor's on-site activities. In order to provide guidance to the Contractor's Representative and his staff, this book is divided into five sections: A summarized general review of the Red Book from the Contractor's perspective. A review of the activities and duties of the Contractor's Representative in the same clause sequencing as they appear in the Red Book. A summary of these activities and duties but arranged in order of their likely time sequence on site. This has the added intention of providing the Contractor's Representative with a means of ensuring that documents are not only properly provided to the Employer and Engineer, but most importantly that they are provided within the

time limits specified in the Contract. A selection of model letters is provided which make reference to the various clauses of the contract requiring the Contractor to make submissions to the Employer or Engineer. Various appendices. The guide is not intended to be a review of the legal aspects of FIDIC- based contracts; legal advice should be obtained as and when necessary, particularly if the Contractor has little or no knowledge of the local law. Armed on site with a copy of The Contractor and the FIDIC Contract, the Contractor's Representative will be more able to avoid contractual problems rather than spend considerable time and energy resolving those problems once they have arisen. Chern on Dispute Boards examines the law of dispute boards and their development internationally, while also covering procedural topics that are of particular concern to those utilising dispute boards. It deals with advanced practitioner issues in the emerging law of dispute boards on an international scale, laying out their methods and methodology not only under the common law, but also under other legal systems such as Civil law and Shari'ah law. Excelling in describing the "how and why", this book also gives samples and/or forms of actual working dispute boards that any

practitioner could use and adapt to their own needs. Readers of this this updated third edition will have explained to them the various international formats and types of dispute boards in use today and be brought up-to-date on the ever evolving law within the field. New to this 3rd edition is the extensive coverage of appeals from Dispute Board Decisions, the laws relative to appeals and the ICC, enforcement procedures and new forms and guidelines for the practitioner. This book guides the reader through the complexities of actual commercial and construction disputes and their successful resolution and also presents a way forward for the dispute board members themselves to administer actual dispute boards all over the world. It is therefore, the number one guide for construction lawyers, engineers and dispute board stakeholders worldwide. "Drafting International Contracts" is an essential resource for anyone working in international business. It features the latest trends, fostering an understanding of how international contracts are drafted in practice. Now in its second edition: the trailblazing introduction and textbook on construction includes a new section on translucent materials and an article on the use of glass.

Materials, Processes, Structures***

Delays in construction projects are frequently expensive, since there is usually a construction loan involved which charges interest, management staff dedicated to the project whose costs are time dependent, and ongoing inflation in wage and material prices. Many techniques are used to analyze delays. Some of these methods have inherent weaknesses and should be avoided. This book points out the shortcomings of these faulty methods and explains how a delay analysis should be performed. It then describes specifically how the analysis is done with CPM schedules. A explanation of delays and delay damages, presented in a straightforward, accessible manner, should be useful to public and private owners, construction managers, general contractors, subcontractors, designers, suppliers, and attorneys whose work involves them in the construction industry. The discussion will include subtleties of the process, such as shifts in the critical path, and non-critical delays. The subject of damages is covered in detail, including the major categories of extended field overhead and unabsorbed home

office overhead. Likewise, the damages suffered by the owner, either actual or liquidated, are also explained. Finally, a chapter is devoted to managing the risk of delays and time extensions from the viewpoints of the various parties to a construction project. A discussion of early completion schedules and constructive acceleration is also included. In this new edition, all chapters are updated to reflect the changes in the construction field since the first edition published over 16 years ago. The Second Edition includes over 40% more information such as new methods for analyzing delays with examples of the proper approach. The author also includes a new chapter on risk management which focuses on the delay-related risks of the various parties in a construction project. Explains the different categories of delays Addresses the concept of concurrency and also non-critical delays Discusses the more common approaches used for measuring and analyzing delays and the strengths and weaknesses associated with them Prevention of Time-Related Delay Problems The 4th edition of FIDIC's book, the Conditions of Contract for Works of Civil Engineering Construction, was published in 1987 yet it has taken time for users to gain experience of the form in practice. This volume has been designed as an aid to anyone having to deal with FIDIC's conditions, featuring: the full text of Parts I and II, plain English explanation of each clause, a clause-by-clause commentary, over 90 suggested forms for use with the conditions and a

comparison of the 3rd and 4th editions. This guide aims to provide assistance in drafting civil engineering contracts, considering tender documentation, drafting and considering amendments to the conditions, advising on contracts, dealing with the conditions on site, administering civil engineering contracts and resolving claims and disputes.

Those involved in construction have to cope with so much learning in their own discipline that they shun further involvement in subjects such as insurance and law which in themselves are so deeply and intensely complex. However, insurance and law are interwoven in the basic procedures used in the construction industry for undertaking work, be they design, construction, supervision or operation, or any combination of them. This thoroughly revised edition of Nael Bunni's successful book, formerly called Insurance in Construction, provides information on risk, construction law and construction insurance for those involved with all aspects of construction. The chapters on risk have been expanded to include recent developments in the area and provide further examples of events which could occur on what can be viewed as the most risky human work activity, namely construction. New chapters are also added to deal with the insurance clauses of the many new standard forms of contract published in recent years, including FIDIC's new suite of contracts published in September 1999, ICE's seventh edition of the civil engineering standard form of

contract, and ICE's second edition of the design/build form.

FIDIC contracts are the most widely used contracts for international construction around the world and are used in many different jurisdictions, both common law and civil law. For any construction project, the General Conditions of Contract published by FIDIC need to be supplemented by Particular Conditions that specify the specific requirements of that project. The International Application of FIDIC Contracts: A Practical Guide provides readers with detailed guidance and resources for the preparation of the Particular Conditions that will comply with the requirements of the applicable laws that apply to the site where the work is carried out, and for the governing law of the contract, for a number of the jurisdictions in which FIDIC contracts are used. This book is essential reading for construction professionals, lawyers and students of construction law.

The Guide to Construction Arbitration

Law of Guarantees

FIDIC 4th

A Practical Legal Guide : a Commentary on the International Construction Contract

Contractual Correspondence for Architects and Project Managers

An Analysis of International Construction Contracts

This work examines the International Federation of Consulting Engineers'

contracts and breaks them down, making them both easier to understand and to refer to.

The book provides the commercial lawyer with a detailed analysis of the various statutory and contractual requirements relating to the law of guarantees. It also examines the guarantor's liability and right against both creditors and debtors. A thorough knowledge of the law and practice surrounding guarantees is essential for lawyers in all areas of commercial law, given the complex borrowing and finance requirements of modern industry and institutions. This is the 6th edition of the highly successful book on Guarantees by Geraldine Andrews QC and Richard Millett QC. The book is considered the pre-eminent treatise on the subject of guarantees in the UK.

Presents an introduction to the key project stages from conception through to completion of construction and then beyond to handing over the resulting structures and services for use. This book covers: project promotion, strategy and design; latest forms of contracts for construction; and partnering, alliancing and programme management.
