***poverty of nations. The answers are found not only in the large forces at work in economies: geography, religion, the broad swings of politics, but also in the small surprising details. In Europe, the invention of spectacles doubled the working life of skilled craftsmen, and played a prominent role in the creation of articulated machines, and in China, the failure to adopt the clock fundamentally hindered economic development. The relief of poverty is vital to the survival of us all. As David Landes brilliantly shows, the key to future success lies in understanding the lessons the past has to teach us - lessons uniquely imparted in this groundbreaking and vital book which exemplifies narrative history at its best.***

Increasing employment and supporting people into work are key elements of the Government's public health and welfare reform agendas. This independent review, commissioned by the Department for Work and Pensions, examines scientific evidence on the health benefits of work, focusing on adults of working age and the common health problems that account for two-thirds of sickness absence and long-term incapacity. The study finds that there is a strong evidence base showing that work is generally good for physical and mental health and well-being, taking into account the nature and quality of work and its social context, and
