During a sequence of meals, the author relates the principal features of physics in easy-to-understand conversations with his wife Beth. Beginning with the studies of motion by Galileo and Newton through to the revolutionary theories of relativity and quantum mechanics in the 20th century, all important aspects of electricity, energy, magnetism, gravity and the structure of matter and atoms are explained and illustrated. The second edition similarly recounts the more recent application of these theories to nanoparticles, BoseEinstein condensates, quantum entanglement and quantum computers. By including accurate measurements of the Cosmic Microwave Background and supernovae in near and distant galaxies, an understanding of how the universe was formed in an Inflationary Big Bang is now possible. We've also gained a much better picture of the life of stars and how they may turn into red giants, white dwarfs, black holes, neutron stars or pulsars.

These puzzles - taken from the celebrated pages of The New Yorker magazine - offer more challenges per 'empty square' than the average crossword! Every cryptic has a twist, a little something extra, a double-dose of difficulty. That's because the clues all have two parts: a definition half and a wordplay half, with anagrams, reversals, containers, and lots of other word games built in. For example, here's a clue: 'Reportedly lost in fog. (4 letters).' Got it? It's 'mist' - a homonym for 'missed' and also a synonym for 'fog'. An introduction enlightens you on all the intricacies of solving cryptic crosswords, and of course the solutions appear at the end with tricks behind the clues explained. It may take a little practice to get the hang of these, but once you do, you'll be hooked for good!
