Make the world your studio! Capture the bustle and beauty of life in your town. Experience life as only an artist can! Join the rapidly growing, international movement of artists united by a passion for drawing on location in the cities, towns and villages where they live and travel. Packed with art and advice from Marc Taro Holmes, artist and co-founder of Urbansketchers.org, this self-directed workshop shows you how to draw inspiration from real life and bring that same excitement into your sketchbook. Inside you'll find everything you need to tackle subjects ranging from still lifes and architecture to people and busy street scenes. • 15 step-by-step demonstrations cover techniques for creating expressive drawings using pencil, pen and ink, and watercolor. • Expert tips for achieving a balance of accuracy, spontaneity and speed. • Practical advice for working in the field, choosing subjects, coping with onlookers, capturing people in motion and more. • Daily exercises and creative prompts for everything from improving essential skills to diverse approaches, such as montages, storytelling portraits and one-page graphic novels. Whether you are a habitual doodler or a seasoned artist, The Urban Sketcher will have you out in the world sketching from the very first page. By completing drawings on the spot, in one session, you achieve a fresh impression of not just what you see, but also what it feels like to be there . . . visual life stories as only you can experience them.

The teenage Luned left her farm with the dream of becoming a scholar-nun on Tintagel. Her hard-won success is now thrown into danger by the arrival of a bitter nine-year-old. Accused of trying to kill her baby brother Arthur, Morgan is imprisoned on this island nunnery. Luned is appointed her guardian. The Abbess Bryvyth battles for Morgan's soul. But Tintagel is visited secretly by Morgan's nurse Gwennol, a wise woman of the Old Religion. Luned herself is endangered as she is caught up in the struggle between them. She is coming ever more surely under Morgan's power. As she grows towards womanhood, Morgan must decide how to use that power.

Land Research Series

In The Coastal Zone, John and Winona Vernberg, the preeminent scholars on the southeastern coastal environment, encourage the general public to gain a more in-depth understanding of environmental science, especially as it pertains to the future of our treasured coastal communities."

This report represents the second volume of the Cultural Landscape Report (CLR) for the Historic Hiking Trail System of Mount Desert Island. This volume focuses more specifically on the 103 marked, maintained trails within the park, which extend over 118 miles (See Appendix B). This report is the culmination of several years of research, analysis, field inventory, and documentation necessary to synthesize voluminous information about the island's extensive trail system. The intended audience for this document includes individuals who are extremely familiar with Acadia's trails and are involved in the planning process as well as those who may be unfamiliar with the trail system and/or trail construction in general but may be involved in future trail rehabilitation efforts. As a result, this document relies heavily on graphics to complement and enhance the narrative. Numerous photographs and sketches are included to clarify the text, illustrate historic and existing conditions, and provide examples of both acceptable and unacceptable usage of specific trail features.

Rudiments of Geology

20th Century Visuality

Vision and movement seem to have shifted center stage in modes of experience in the last century: as a result of their joint effect, slow contemplative gazes at static images seem to be increasingly displaced by distracted "vernacular" ways of seeing.

Looking out of the window of a speeding car, receiving photographs of Earth from outer space, watching the flickering images of the TV screen, scrolling through a text, zooming in on a location in Google Earth, or sending images via mobile phones or webcams - all these are unique visual experiences that were impossible before various inventions in the 20th century originated completely new kinds of movement. The double meaning of "moving images" is meant to signal the specificity of motion to these imag(n)ings and, at the same time, to express the emotional power of those visual images which are able to transcend the constant stream of images in contemporary perception. This book presents a broad overview of the current state of knowledge regarding the Red Sea, from its geological formation and oceanographic development to the environmental influences on its ecology and the changes it is experiencing due to the rapid development of its coastlines and role as one of the world's major transport routes. The book gathers invited contributions from researchers with an interest in the geology, geophysics, oceanography and environment of the Red Sea, while also providing comprehensive new data and a complete review of the literature. It will be of interest not only to researchers actively studying the sea and its surroundings, but will also appeal to all those involved in planning and managing the Red Sea, its environment, its resources and the countries which rely on its existence.

For decades, marine scientists Robert and Alice Jane Lippson have traveled the rivers, backwaters, sounds, bays, lagoons, and inlets stretching from the Chesapeake Bay to the Florida Keys aboard their trawler, *Odyssey*. The culmination of their leisurely journeys, *Life along the Inner Coast* is a guide to the plants, animals, and habitats found in one of the most biologically diverse regions on the planet. It is a valuable resource for naturalists, students, and anyone who lives or vacations along the Atlantic inner coast. How to Read a Florida Gulf Coast Beach

Cultural Landscape Report for the Historic Hiking Trail System of Acadia National Park

Morgan Le Fay 2

Textured Soft Shapes: Rough Road

Come explore the geology of Florida's Gulf Coast beaches, from a bird's-eye view down to a crab's-eye view. You'll journey from Panhandle sugar-sand beaches to southwestern shell beaches, taking a fresh look at the ever-changing landscape. With Tonya Clayton as your guide, you'll learn how to recognize the stories and read the clues of these dynamic shores, reshaped daily by winds, waves, and sometimes bulldozers or dump trucks. This dynamic tour begins with a broad description of Florida's Gulf Coast, roaming from popular Perdido Key in the northwest to remote Cape Sable in the south. You'll first fly over large-scale coastal features such as the barrier islands, learning to spot signs of the many processes that shape the shores. In subsequent chapters you'll visit dunes and beaches to check out sand ripples, tracings, and other markings that show the handiwork of beach breezes, ocean waves, animal life, and even raindrops and air bubbles. You'll also encounter signs of human shaping, including massive boulder structures and sand megatransfers. With a conversational style and more than a hundred illustrations, How to Read a Florida Gulf Coast Beach makes coastal science accessible, carrying vacationers and Florida natives alike on a lively, informative tour of local beach features. Southern Gateways Guide is a registered trademark of the University of North Carolina Press

The SCOR (Scientific Committee on Ocean Research of ICSU) Working Group 106 was tasked with reviewing the geomorphic, sedimentary and oceanographic dynamics of muddy coasts, assessing the impact of sea level rise on muddy coasts, especially in estuaries, and to recommend future research pathways relating to muddy coasts. This book addresses these questions and includes chapters on the research issues of muddy coasts, the definition of muddy coasts, sea level rise effects on muddy coasts, fundamental dynamic processes effecting muddy coast formation, the role of mangrove and salt marsh vegetation, bio-geochemistry of muddy coast deposits, storm surge effects on muddy coasts, human impacts on muddy coasts, and a detailed geographical review of muddy coasts of the world. The volume presents examples of muddy coasts sedimentation from many different environments of the world including the broad expanse muddy coast of China, muddy coasts of continental trailing edges (the Americas), muddy coasts in seasonally ice covered environments, muddy coasts in areas of tropical coral reefs, muddy coasts from the tropics, muddy coasts resulting from large river discharges, and muddy coasts of mid-latitude oceanic islands.

The Formation, Morphology, Oceanography and Environment of a Young Ocean Basin

Acorns delineates the future of humanity as a reunification of intellect with the Deep Self. Having chosen to focus upon ego (established securely by the time of Christ), much more beta brain wave development will destroy our species and others, which process has already begun. We create our own realities through beliefs, intents and desires and we were in and out of probabilities constantly. Feelings follow beliefs, not the other way around.

Consists of brief items of interest to sportsmen on current conditions of fishing and hunting.

Spiced

Harness the power of spices to take your dishes from simple to spectacular with 139 exciting recipes, plus find 47 easy spice blends and condiments you can use many ways. Spices: You probably have a cabinet full of them, but do you know how to make the most of them? Spiced opens up the world of possibility hidden in your own pantry, with six chapters, each of which shares a way to use spices to amp up the flavor of your cooking, along with foolproof recipes that put these simple techniques to work. Sprinkle a finishing salt you make from sea salt and herbs on seared white fish fillets to make them special. Make a different roast chicken every week by applying a different rub. Learn the best spices to use in curries—and when to add them for fragrant (not dusty) results. Add flavor—and texture—with homemade blends (you'll eat your spinach when it's topped with pistachio dukkah). Infuse condiments with spices (try chipotle ketchup on a burger). With the following six simple techniques, plus vibrant recipes, you'll find yourself not only spooning chili powder into the chili pot but making the chili powder yourself, or flavoring desserts with saffron or cardamom rather than just cinnamon. #1: Season smarter with salt and pepper. You'll learn about brining, using peppercorns of all colors, and finishing finishers like sriracha salt. #2: Give meat and vegetables a rub. We'll provide blends that you can put to use in our recipes (try juniper and fennel on salmon) or your own. #3: Bloom and toast. Bring out ground spices' complexity by cooking them in oil; unlock dried chiles' fruity or nutty flavors by toasting them. #4: Finish foods with flair. Spice-and-nut/seed blends likes shichimi togarashi (a mix of spices, orange zest, and sesame seeds) add texture, too. #5: Let spices steep. Infuse spices into condiments like pickled fennel that punches up chicken salad or rosemary oil to drizzle over bruschetta. #6: Bake with spices. Go beyond vanilla by rolling doughnuts in strawberry-black pepper sugar. Make your own rose water and add it to pistachio baklava.

Remote Sensing Technology In India Started In The 1960S. Space Technology Was Developed During The 1970S And 1980S To Use Satellites And Sensors In The Areas Of Communication To Exploit Meteorological And Ground Resources. Like Some Other Developing Countries, India Could Bypass The Intermediate Technology Stage And Leapfrog Into The High Technology Area.India S First Satellite In Irs Series Was Irs-1A, Launched In March 1988 By A Russian Vostok Launch Vehicle. Our Space Technology Has Attained Momentum And Made Tremendous Achievements By Launching The Oceansat-1 For Ocean Resources Monitoring; Resourcesat-1 For Agricultural Applications; And Cartosat-1 With A High Resolution Panchromatic Camera For Cartographic Applications. In India, The Remote Sensing Technology Along With Geographic Information System (Gis) Is Widely Being Used For More Than Two Decades For Inventorying, Mapping And Monitoring Of Earth Resources, And For Mitigation And Management Of Natural Disasters. In Days To Come It Will Become The Most Powerful Tool For Management And Distribution Of Information For Various Purposes.This Book Is Solely Written To Meet The Requirements Of Undergraduate Courses In B.E. (Civil Engineering), B.Tech (Geoinformatics), The Postgraduate Courses And M.Tech In Remote Sensing, Postgraduate Diploma In Remote Sensing And Gis, And M.E (Geoinformatics) Of Various Universities And Institutions. Topics Are Covered With Adequate Tables And Illustrations Essential To An Introductory Text. The Book Offers Key Concepts With The Use Of Simple And Limited Mathematics. Digital Image Processing, Which Forms The Backbone Of The Book, Is Dealt With Special Care. The Book Explains Fundamental Basis Of Gis Technology, Spatial Data Modeling, Attributes Data Management, Gis Data Analysis And Modeling. It Will Also Serve As An Ideal Reference Book For Researchers In This Field And Practical Users Of This Technology.
